

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions of claims in the application.

Claims 1-4 (canceled)

Claim 5 (Currently Amended): A processor connected via a network system to an operation terminal in which inputs are made through a Web browser, the processor comprising:
an interpreter that: (1) interprets CGI scripts to specify a display control file which is designated through the Web browser and describes a processing requested by the operation terminal; (2) ~~analyzes a description of a display control file, which is designated by the Web browser, describing therein display control information for a Web page that is displayed on the operation terminal~~; executes a processing program to perform the requested processing based on the description of the display control file; and (3) ~~processes a processing program based on the description of the display control file; and~~ (4) outputs the display control information described in according to the description of the display control file to the Web browser based on the and result of the processing,

wherein the display control file, the CGI scripts, and the processing program are configured separately.

Claim 6 (Previously Presented): A processor as set forth in claim 5, wherein, in the display control file, the display control information is described separately in a file control division and an HTML division.

Claim 7 (Previously Presented): A processor as set forth in claim 5, wherein the interpreter reads the display control information for each line and executes an analyzing process.

Claim 8 (Previously Presented): A processor as set forth in claim 6, wherein the interpreter embeds, based on the description of the HTML division, dynamic information related to the display of the Web page in HTML output and outputs the HTML output.
